

Biodiversity Study - Kalorama

The following is a working list (to February 2024) of the biodiversity I have so far been able to identify in the bush on my family's land at Kalorama on Corhanwarrabul (Mt Dandenong). It is a list compiled out of deep love and curiosity by a very amateur naturalist. I have only included living organisms that I have been able to identify with reasonable confidence to a species level. This is an on-going project to satisfy my curiosity, it is compiled with a belief that it is important to pay attention to what is around us, to honour and acknowledge the presence of other living beings.

Organisms are acknowledged by their Woiwurrung/Wurundjeri name first, their scientific name and common name where known.

There are only 490 organisms on this list. A small fraction of the life that teems around me as I work in this very special patch of bush.

In order to compile this list I leant heavily on the knowledge of many wonderful scientists and deeply curious people, many excellent text books and online resources like iNaturalist. Perhaps my favourite reference is Marilyn Bull's wonderful *Flora of Melbourne*.

The idea to undertake such a survey came from seeing Flora and Fauna lists compiled by the Australian Wildlife Conservancy for one of their properties - they serve a vital function in their conservation efforts and seemed such a beautiful thing to me, to know so intimately, to attend with such curiosity seemed an act of love that I wanted to bring home.
